

WHAT IT DOES

The wizard builds the win probability of a project from **who decides**, **how strong our product is** and **where the competitors stand**, instead of a single number typed by hand. It shows how the number is built, warns when something is missing and tells you what to do next. Button names look like **this**; menu paths like **Projects → project → Open the wizard**.

TESTING STAGE

For now each sales person chooses **per project** whether to enter the win probability by hand or with the wizard. Both figures are kept, so SM Projects and the GM can compare which one predicts the result better before the wizard becomes the standard.

1 The formula in one line

Win probability = Go (the project goes ahead) × Get (we win it if it goes ahead)

- **Go** comes from funding, approvals and the project stage (step 1).
- **Get** compares us with each competitor across four **pillars** – **Contractor**, **Consultant**, **Product** and **Client**. The decision type sets how much each pillar weighs (step 1); the people map (step 2), product scores (step 3) and competitor scores (step 4) fill them in.
- Get is then reduced if we have no **control** of the people, if a **veto** holder is not with us, or a **hard cap** applies (e.g. the final approver is against us → max 10%).
- **Confidence** shows how much of the map is verified rather than assumed or unknown.

2 Switch the wizard on for a project

- 1 Open **Projects** → tap the project.
- 2 Tick ☒ **Use the Win Probability Wizard**. The tick is per project – use it for your **top 3–5 projects** first.
- 3 Tap **Open the wizard**. The last wizard score and its date are shown beside the button.

☒ Use the Win Probability Wizard **Open the wizard** Last wizard score 41% · 20 Sept 2026

Request changes Review status

Project page – the wizard tick, “Open the wizard” and the last wizard score.

AFTER A VISIT

When you finish a visit on a project that has the tick on, the app asks “*Update the win probability?*” and offers **Open the wizard** instead of the manual % box.

3 The wizard screen and the live picture

The card at the top stays visible on every step and updates as you tap:

- **Wizard win** – the final %. **Go** and **Get** – its two parts. **Confidence** – green when well verified, amber or red when much is assumed. **Expected value** – lighting value × wizard %.
- **Ring** – the wizard %; the black tick marks the project's current % (manual or approved).
- **As you change it** – a small line of how the % moved with each change in this session, with “▲ +2 pts last change”.
- **Pillars** – for each pillar, our strength (blue) against the best competitor (orange) and its weight. A pillar not yet known is faded; a pillar not on the project shows “not on this project”.

After two changes (project stage moved to Tender, then Construction) the wizard rose from 26% to 30%.

The six steps are along the tabs: **1 Project** **2 People** **3 Product** **4 Competitors** **5 Gut feel** **6 Result**. You can jump between them at any time. The map is kept when you save a score, so next time you only update what changed.

4 Step 1 – Project: how the decision is made

Kandy City Hotel – lobby and façade lighting
UDA - now 50% (Our brand specified)

26% Wizard win | 85% Go – project happens | 30% Get – we win it | 65% Confidence (verified) | LKR 10,710,000.00 Expected value

As you change it: 26% wizard. No change yet. Started at 26% - project now 50% - make a change to see it move. tick = now 50%

Pillars Us (blue) vs Best competitor (orange)

Pillar	Weight	Us	Best competitor
Contractor	10%	68	50
Consultant	35%	66	50
Product	35%	68	60
Client	20%	64	60

1 Project | 2 People | 3 Product | 4 Competitors | 5 Gut feel | 6 Result

HOW THE DECISION IS MADE

Decision type: Specification-driven

Pillar weights: Contractor 10% - Consultant 35% - Product 35% - Client 20%

Contractor %	Consultant %	Product %	Client %
10	35	35	20

WILL THE PROJECT GO AHEAD?

Funding: Confirmed | Approvals: Received | Project stage: Detailed design

Go probability 85%

Close | Next

Map last saved 01 Oct, 15:20 – changes here are kept when you save a score.

Step 1 – decision type, pillar weights and the Go factors.

- Decision type** – pick who really decides the lighting package. It sets the pillar weights (you may adjust them; they should add to 100):

Decision type	Contractor	Consultant	Product	Client
Not yet known	25	25	25	25
Specification-driven (consultant specifies)	10	35	35	20
Price-driven or tender	20	15	35	30
Owner-driven	15	15	20	50
Design and build (contractor designs and buys)	40	15	25	20

- Will the project go ahead?** – Funding (Confirmed / Likely / Uncertain), Approvals (Received / Pending / Not started) and Project stage (Construction / Tender / Detailed design / Concept). These give the **Go** %.

5 Step 2 – People: map who decides

For each people pillar (Contractor, Consultant, Client) list everyone who can affect the decision on **our package**. The wizard pre-fills people from the project’s stakeholders, contacts and visits.

Map everyone who can affect the decision on our package. Add, rename or remove roles and sub-roles as this project needs; mark a pillar “not on this project” when it does not exist (with the reason) or “not yet known” while nobody is identified.

CONTRACTOR

■ Contractor **On this project** Not yet known Not on this project

Main contractor – Project Director - Maga Engineering
Remove

Role: Main contractor – Project Di
Organization: Maga Engineering
Name (optional):
Authority on our package: 2 - Recommends

Our control: Contact only
What drives their view: Price
Evidence: Verified (they said or did it)
Days since last contact: 20

Reports to: Nobody
Influenced by: Nobody

Support for us (0 backs a rival · 5 neutral · 10 champion)
0 1 2 3 4 5 6 7 8 9 10
Used after adjustments: 5.0
☐ Can accept or reject on their own (veto) ☐ A competitor is close to this person

MEP contractor – Project Manager - MEP subcontractor
Remove

Role: MEP contractor – Project M
Organization: MEP subcontractor
Name (optional):
Authority on our package: 3 - Decides or specifies

Our control: Controlled
What drives their view: Technical
Evidence: Verified (they said or did it)
Days since last contact: 10

Reports to: Main contractor – Project ...
Influenced by: Nobody

Support for us (0 backs a rival · 5 neutral · 10 champion)
0 1 2 3 4 5 6 7 8 9 10
Used after adjustments: 8.0
☐ Can accept or reject on their own (veto) ☐ A competitor is close to this person

+ Add a role

Contractor pillar with two people. Every field changes the score.

Field	What to enter
Role / Organization / Name	The position (e.g. “MEP consultant – Electrical Engineer”), the company, and the name if known.
Authority on our package	4 · Final approval, 3 · Decides or specifies, 2 · Recommends, 1 · Influences. Higher authority weighs more.
Our control	Controlled (we can get them to act), Contact only , No access . Low control lowers the result.
What drives their view	Price, Technical, Past experience or Relationship – used for the “What to do next” advice.
Evidence	Verified (they said or did it) or Assumed . Assumed lowers confidence.
Days since last contact	Over 30 days for a decision-maker triggers a “Visit ...” action.
Reports to / Influenced by	Links people together – a supporter’s boss or influencer pulls their score.
Support for us (0–10)	0 = backs a rival, 5 = neutral, 10 = champion. “Used after adjustments” shows the value after evidence, access and influence.

Field	What to enter
Veto / competitor close	Tick veto if they can accept or reject alone. Tick a competitor is close if a rival has a relationship with them.

Pillar state – not every project has every pillar

Each pillar has three choices: **On this project** **Not yet known** **Not on this project**.

- Not yet known** – nobody identified yet. The pillar counts as neutral (50%) and confidence drops.
- Not on this project** – e.g. a supply-only order with no contractor. The weight is shared among the other pillars. A **reason is required**; SM Projects sees it.

CONTRACTOR

Contractor

On this project

Not yet known

Not on this project

Why is there no contractor on this project? (SM Projects sees this) *

e.g. supply-only order to the client

Contractor marked “not on this project” – its weight is shared out and a reason is asked for.

Add, rename or remove roles

Add a role – Contractor

Standard role

Select...

Or a role of your own (e.g. a sub-role)

Organization

Name (optional)

Cancel Add

+ Add a role

- 1 Tap **+ Add a role** under a pillar. Pick a **standard role** or type your own (e.g. a sub-role like “Site engineer – lighting”), then the organization and name.
- 2 Rename any role by editing its **Role** field.
- 3 **Remove** drops a role. Removing someone with authority 3 or 4 asks for a reason – it appears in the review for SM Projects.

6 Step 3 – Product against the best competing product

OUR PRODUCT AGAINST THE BEST COMPETING PRODUCT

Technical fit (weight 60%)
0 1 2 3 4 5 6 7 **8** 9 10

Price (weight 25%)
0 1 2 3 4 5 **6** 7 8 9 10

Commercial terms – lead time, stock, payment, warranty (weight 15%)
0 1 2 3 4 5 6 **7** 8 9 10

How is our product specified?
Named "or equal" ▼
"Or equal" and open specifications leave room for substitution at contractor stage.

Product-side teams
Our technical team, the manufacturer's support, competitors' local agents. A strong team lifts that side's product score by up to 15%.

Role	Side	Strength	
Our application engineer	Our side ▼	0 1 2 3 4 5 6 7 8 9 10	Remove
Rival brand local agent	Competitor side ▼	0 1 2 3 4 5 6 7 8 9 10	Remove

+ Team member

Deal-breakers

☐ Our product fails a mandatory specification item

☐ Our price is above the confirmed budget, with no approval to exceed it

Back Next

Step 3 – product scores, specification, product-side teams and deal-breakers.

- 1 Score **Technical fit** (60%), **Price** (25%) and **Commercial terms** – lead time, stock, payment, warranty (15%) – from 0 to 10.
- 2 **How is our product specified?** *Named brand only* is strongest; *Named "or equal"* and *Open* leave room for substitution at contractor stage.
- 3 **Product-side teams** – add our application engineer, the manufacturer's support, a rival's local agent, with strength 0–10. A strong team lifts that side by up to 15%.
- 4 **Deal-breakers** – tick only if true: failing a mandatory spec item or being above the confirmed budget without approval sets the result to **0%**.

7 Step 4 – Competitors

Add each competing brand and score its position in each pillar from 0 to 10. If you don't know, leave **6** – assume they are working the people you can't reach. Use **+ Add a competitor** or **Remove**.

1 Project 2 People 3 Product **4 Competitors** 5 Gut feel 6 Result

Score each competitor's position in each pillar from 0 to 10. If you don't know, leave 6 – and assume they are working the people you can't reach.

COMPETITOR 1 Remove

Name / brand
Rival brand A

Contractor
0 1 2 3 4 **5** 6 7 8 9 10

Consultant
0 1 2 3 4 **5** 6 7 8 9 10

Product
0 1 2 3 4 5 **6** 7 8 9 10

Client
0 1 2 3 4 5 **6** 7 8 9 10

Competitor 1 scored per pillar.

8 Step 5 – Gut feel

Before looking at the result, tap the % you would give this deal. It does not change the wizard – it is kept for comparison, and a gap of 20 points or more is flagged so you re-check the map. Then tap **See result**.

YOUR GUT FEEL

Before you look at the result: what win probability would you give this deal?

0% 5% 10% 15% 20% 25% 30% 35% 40% 45% 50% **55%** 60% 65% 70% 75%

80% 85% 90% 95% 100%

Back See result

Map last saved 01 Oct, 15:20 – changes here are kept when you save a score.

Step 5 – your gut feel.

9 Step 6 – Result

RESULT

No control in the client pillar, which holds the final authority: capped at 30%

Your gut feel (55%) is 29 points higher than the wizard. Check for optimism, or add what you know to the map.

HOW THE NUMBER IS BUILT

Our strength 0.66 vs Rival brand A 0.56, Rival brand B 0.44	
Head-to-head chance against all competitors	70%
× Control factor (control 45%)	× 0.72
× Veto factor	× 1.00
Cap applied	max 30%
= Get (we win if it goes ahead)	30%
× Go (the project goes ahead)	× 85%
Final win probability	26%

PILLARS

Contractor	score 68% - control 60% - weight 10%
Consultant	score 66% - control 60% - weight 35%
Product	score 68% - control 50% - weight 35%
Client	score 64% - control 0% - weight 20%

WHAT TO DO NEXT

1. Principal Architect (Architect): set up a senior meeting and keep regular follow-up
2. Main contractor – Project Director (Maga Engineering): review the offer, payment terms or value engineering
3. Work with the consultant to name our brand in the specification

Result – warnings, how the number is built, pillars and what to do next.

- **Red / amber notes** – caps and warnings. In this example the owner (final approval) is in the client pillar where we have **no control**, so Get is **capped at 30%**; and the gut feel is 29 points above the wizard.
- **How the number is built** – head-to-head chance against all competitors × control factor × veto factor, the cap, then × Go.
- **Pillars** – our score, our control and weight in each.
- **What to do next** – up to three actions from the map (e.g. senior meeting with the architect; review the offer for the price-driven contractor; get the brand named in the specification). Put them in your next weekly plan.

READING THIS EXAMPLE

The fastest way up is not a better price – it is getting **access to the owner**. Once we have contact or control in the client pillar, the 30% cap is lifted.

10 Use the result

Send the win probability to SM Projects
The wizard gives 26%. The project is at 50%. Choose the stage and the % to use.

Stage / milestone
Our brand specified (40-65%)

Win probability % *
26

Comment

Cancel Send for approval

Sales: send to SM Projects

- 1 **Sales people** – tap **Send 26% for approval ...**. Choose the stage/milestone, keep or adjust the %, add a comment and tap **Send for approval**. It goes to SM Projects as a project change request.
- 2 **SM Projects / GM** – the button reads **Set 26% ...** and updates the project directly.
- 3 **Save score only** keeps the score for the trial without changing the project %.
- 4 **Score history** at the bottom lists every score – wizard %, the % at the time, chosen %, and whether it was sent or set.

SM PROJECTS REVIEWING A REQUEST

The request shows the wizard %, the reason, and any flags: pillars marked not on the project (with reason), removed decision-makers (with reason), low confidence, and big gaps between wizard, gut feel and the current %.

11 Wizard trial page (SM Projects and GM / DGM)

Projects → **Wizard trial** compares the two methods:

- Projects scored, scores in total, the average gap wizard vs manual, and how many scored projects are now won or lost.
- **Which was closer to the result** – by band (under 40%, 40–69%, 70% and over). A good forecast wins about as often as its %. Reliable after about 30 decided projects.
- **Projects (latest score)** – wizard, manual then, gut, confidence, now, and how it was used. Tap a row to open the project.

Testing stage: sales people choose per project to enter the win probability by hand or with the wizard. Both figures are kept here so they can be compared – and, once projects are won or lost, checked against the result.

1 Projects scored with the wizard

1 Scores in total

9 Average gap wizard vs manual (points)

0 Scored projects now won or lost

WHICH WAS CLOSER TO THE RESULT

Reliable after about 30 decided projects – 0 so far. A good forecast wins about as often as its %.

Wizard trial page.

12 On the phone

Wizard on a phone

The wizard works the same on the Android app and the phone browser. The live card stacks above the steps; scroll the tab row sideways to reach Gut feel and Result.

Good practice

- Start with your **top 3–5 projects**, and update them after each important visit.
- Use **Not yet known** when you haven't found the person yet; use **Not on this project** only when that pillar really doesn't exist.
- Mark **Verified** only when the person said or did something that shows it.
- Don't move numbers to reach a % you want – the gut-feel gap and the trial page show it. Fix the map with facts instead.
- Act on **What to do next** – it is the shortest route to a higher %.
