

YOUR FLOW

Inquiry (Route B) or design released from Design (Route A) → Accept → Assign estimator → Estimator prices → Approve quotation → Release to sales. Button names are shown like **this**; menu paths like **Jobs → To accept / assign**.

DEADLINES TO WATCH

Accept / assign within **4 working hours** · Approve a quotation within **1 working day** · Leave at least **1 working day** before the customer deadline · Estimator hold requests within **4 working hours**.

1 Start of the day – the Estimation Board

- 1 Your home screen is the **Estimation Board**: tabs **Queue** (from Design and direct Route B) · **In progress** · **Approval** · **Released**.
- 2 It also shows **workload per estimator** and jobs waiting for supplier prices. Deal with red and amber items first.

2 Route B – estimation-only inquiry

Open the inquiry from the **Queue**.

- 1 Check the **BOQ / specification**, **Duty status**, dates and the client solution expectation.
- 2 All good: tap **Accept**.
- 3 BOQ or specification missing – design needed: tap **Send to Design (Route A)** with a reason. It becomes Route A and goes to the Design Manager; sales is notified.
- 4 Information missing: tap **Return for information** (the clock pauses). Not valid: tap **Reject** with a reason.

3 Route A – design released from Design

When the Design Manager taps **Release design to Estimation**, the job arrives in your **Queue**.

- 1 Open the estimation job, check the **Inputs** (request documents and approved design pack) and tap **Accept**.

4 Assign the estimator

On the estimation job tap **Assign estimator**.

- 1 The default is pre-selected: **Assistant Manager – Estimation** for Infrastructure / Industrial; **Estimation Executive** for Hospitality, Retail, Institutions and Commercial. Choosing the other person needs a reason.
- 2 Set the **value band** and the **due date** – it must leave at least 1 working day before the customer deadline.
- 3 Save. The estimator is notified and confirms the due date.

5 Follow the work

- 1 The estimator prices the job, raises + **Supplier price request** when needed, and asks Design through **Clarifications to Design**.
- 2 Due date changes: **Change due date** (reason logged). Workload changes: **Reassign / re-plan**. Waiting on something: **Put on hold** / **Resume**.
- 3 **Approvals** tab: estimator hold requests (answer within 4 working hours).

6 Approve the quotation (within 1 working day)

When the estimator taps **Submit for approval**, the job moves to **Approval**.

- 1 Open the job: check the draft quotation PDF, the restricted costing sheet, **Quoted value**, **Cost** and **Margin %**, **Validity** and alternatives.
- 2 Correct: tap **Approve quotation**. Changes needed: tap **Return** with comments.
- 3 Above the value limit or below the margin floor, approval goes automatically to **GM / DGM** as a second step.

7 Release to sales

After final approval:

- 1 Tap **Release to sales**. The quotation files are renamed with the quotation number and the sales person is notified.
- 2 Sales then records the submission to the client and the result (won / lost).

+ Also yours

- **Approvals** tab: client expectation changes (together with the Design Manager).
- You are notified when a design is sent to Estimation, when the client changes the duty status, and on Level 2 escalations for your team.
- **Reports**: Estimation team performance, Quotation register, Tender and competitor report.
